## Hexagon (ROMER) Absolute Arm 6-Axis

### The Portable Measuring Arm Optimised for Probing

A specialised touch measurement tool that also boasts the option for entry-level 3D scanning – the Absolute Arm 6-Axis is one of a kind. Based on patented technology with Absolute Encoders located at every articulation point and designed with ease-of-movement and usage as a focus, this is a portable measuring arm like no other.

WiFi and battery options ensure absolute portability while almost 100 probe tip accessories make finding the right tool for any specific touch probe or infrared tube probe application simple. An established repeatable kinematic probe mounting allows for hot-swapping of probe tips with no recalibration, and there's no need to worry about warm-up or referencing on set-up or repositioning – these are advanced technology solutions that deliver increased productivity and make portable measurement easier than ever.
